FIRE RECORDS MANAGEMENT

Professional Firefighters deserve and demand the best – the best equipment, the best training, the best information, and the best support. Why settle for less when it comes to Fire Reporting software? ADSi DataForce Web Enabled Fire Records software is the professional solution you're looking for, with the quality, functionality, and flexibility you expect and deserve.

Fire Incident Reporting (NFIRS Compliant)

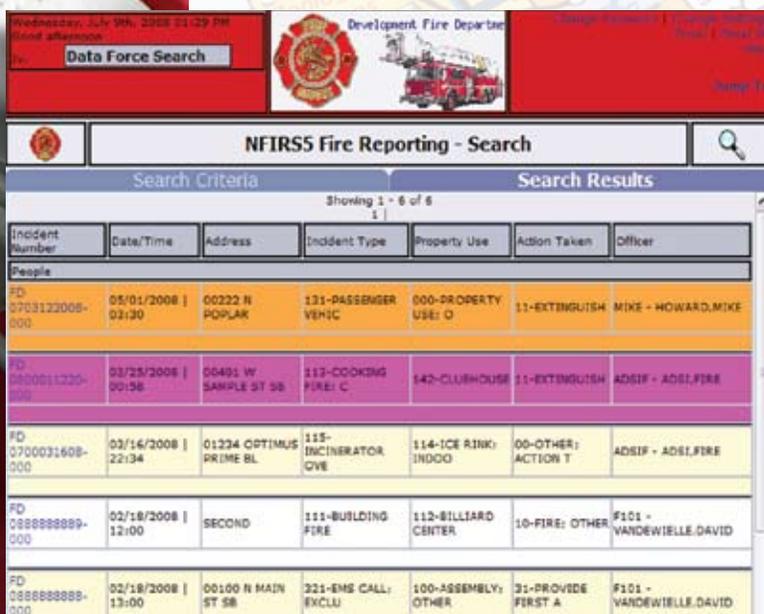

Fire incident reporting is fast and accurate with reportable data automatically populated from relevant CAD fields. Complete error checking system ensures accuracy and ADSi's continual development process ensures that the latest NFIRS requirements are met.

Address Management & Fire Inspections

ADSi's Address Management module effectively manages information about individual locations or properties identified by addresses or building numbers. Each address record maintains detailed information regarding special alerts, persons associated with the property, code enforcement inspections with violation and correction tracking, permits, pre-emergency plans, and on-site hazardous materials, and manages the scheduling of future inspections. Attach digital files of any kind (photos, videos, audio, etc.) to create an all-inclusive record, and a complete "record history" feature ensures record integrity as well as chronological or historical fact-checking.

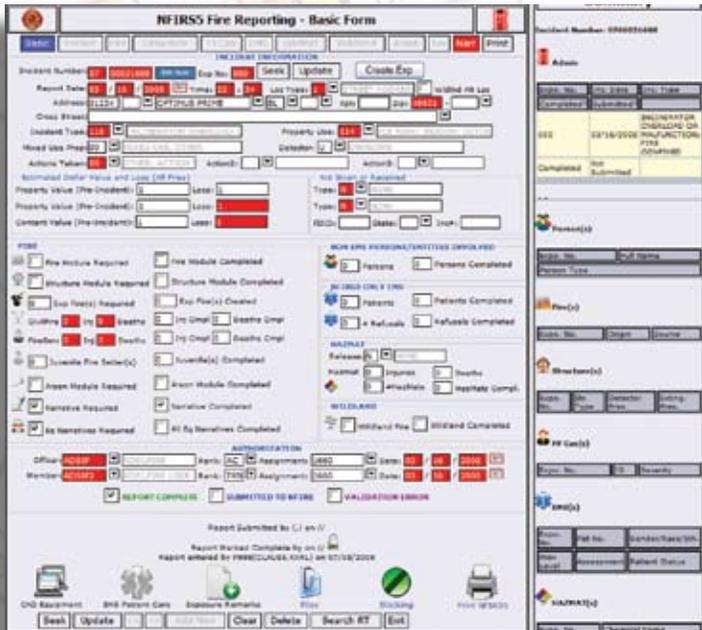

Hydrant Management

Each hydrant record contains detailed information about hydrant specifications, hydrant location, flow tests, inspections, maintenance, status, and closest alternative in-service hydrants (using GPS coordinates). The system facilitates the scheduling of future inspections or tests. Digital files are easily attached to allow for photographic, video, and/or audio records relating to each hydrant.

The screenshot displays the 'Data Force Search' interface for 'NFIRS5 Fire Reporting - Search'. It shows a search criteria section and a table of search results with columns for Incident Number, Date/Time, Address, Incident Type, Property Use, Action Taken, and Officer.

Incident Number	Date/Time	Address	Incident Type	Property Use	Action Taken	Officer

Personnel Training

ADSi's Personnel Training module combines individual and group training records with user defined curriculum tables to track individual progress toward training goals or certifications. Scheduling features enhance the individual tracking mechanism by identifying upcoming training events that will satisfy requirements. Individuals can be assigned to multiple training groups defined by duty assignment or technical skill disciplines. This flexibility functions in concert with curriculum tables to effectively track progress for initial certification attainment or recertification in the various fire service specialties. Additionally, the module effectively handles continuing training, special training events, and regulation mandated training tracking attendance and competency. Attachment of digital files of any kind permits an all-inclusive record.

Apparatus & Equipment Maintenance

Easily track inventory, inspections/tests, and routine maintenance procedures. Compartment-by-compartment inventories for each apparatus, quick verification of the assigned location for a specific item, scheduling future inspections or tests, and easy attachment of digital files help streamline asset control.

Duty Roster

ADSi's Duty Roster module was modeled after traditional company logs listing company members, in-service apparatus, and reserve apparatus. System wide integration automatically inserts the names of participants into events or activities. Duty changes are easily made and a complete module log is maintained for historical accuracy.

Personnel

ADSi's Personnel module functions as a secure central repository for personnel information including: base information, assignments, skills, assigned PPE, summarized medical/fitness history, recall status, emergency contact(s), and insurance information.

Changes and updates are maintained as part of the record and displayed in a summary grid permitting easy access to historical information. Attachment of digital files of any kind permits an all-inclusive record.

Community Safety

ADSi's Community Safety module documents activities related to community safety events or programs such as "Learn Not to Burn" presentations, bike safety rodeos, child car-seat distributions, or drowning prevention classes. Easily track the number of participants, items distributed or allotted to the public, and resources expended. Contact information and future event scheduling features enhance the functionality of the module.

Extraordinary Resources

Manage and maintain records related to current resources and special skills within your local community that are available on short notice. Vendors often make their resources (lumber, heavy equipment, etc.) available for emergency needs. The Extraordinary Resources module enables you to find them when you need them...when seconds count. Contact and vendor information can be used for scheduled update requests or electronic "mail-outs" to ensure continued availability of resources.

Other ADSi Software & Services

ADSi offers CADForce for dispatch operations (Fire, LE, EMS), designed to help coordinate field personnel and manage resources. ADSi understands that with CAD, "downtime is not an option," so CADForce is designed for maximum uptime and dependability.

DataForce Web LE, ADSi's state-of-the-art Law Enforcement Records Management System, continues to provide all the functions you might expect from an electronic "filing cabinet," such as secure and dependable record storage and retrieval, enhancing your agencies effectiveness in the court room. However, ADSi has raised the bar in records management, creating software that not only helps you to prosecute crimes – but can help you solve them, too! Utilizing the latest in programming technology, DataForce delivers investigative power to your agency like never before. The DataForce Search global search engine is included as a vital piece of all DataForce Web modules – and "Web" means you can access the system from anywhere in the world via a secure high-speed internet connection.

ADSi also offers municipal court software, mug-shot imaging, CAD & records mapping, crime scene photo management, electronic crime scene diagramming, mobile data applications, bar coding for property & evidence and inventory modules, and more.

When you're ready to upgrade or purchase new software, why not consider a company that has been faithfully serving public safety professionals like you for more than 26 years – under the same name, the same ownership, and the same management – A company with a proven track record... one that delivers software on-time and within your budget. That company is ADSi – specialists in public safety software since 1981...and still the right choice.

History of ADSi

Since 1981, ADSi has supplied public safety departments with effective and dependable software tools. In fact, ADSi has installed software in more than 100 agencies all across the United States at the City, County, State, and Federal government levels.

The secret to our success is no secret at all: First, we offer great software at a fair price. Second, we support our customers every step of the way (some ADSi customers have been with us since the early 1980's because of our dedicated and professional service). Third, we listen to our customers – as a customer, you tell us what you need your software to do, and we continually strive to improve the software to exceed your expectations.
